M. Birkeland shines a sociological lens on the relevant issues of legal cannabis and investigates the most pressing issues. Who are the cannabis industry participants? What are the costs in running a marijuana business and how much money is generated? Who are the users of cannabis in this newly legal market? What are the challenges in creating a regulatory framework? What has happened to crime, teenage use, and the black market? Birkeland’s book provides a documentary-like account of the emerging cannabis industry in Colorado, the first jurisdiction in the world to legalize cannabis cultivation, manufacturing, and retail sales. Birkeland worked with cannabis business owners, interviewed regulators, policy-makers (including Governor Hickenlooper), industry participants, and opponents to legalization. He attended trade shows, symposiums, meet-ups, penetrated the black market, and visited communities that have embraced cannabis sales. Through his firsthand experience, interviews and research, Birkeland traces the evolution of the cannabis industry from strictly illegal to legal, and he documents the challenges operators, regulators, and consumers face in the quest to carry out sales of a federally illegal product. Is cannabis legalization a short-lived social experiment, or is it ushering in a new era of herbal medicine and recreational use that will transform society? The author uncovers the realities of the newly legal cannabis industry in Colorado, a litmus test for other states considering legalizing cannabis.

Social Computing and Behavioral Modeling-Huan Liu 2009-04-05 Social computing is concerned with the study of social behavior and social c-text based on computational systems. Behavioral modeling reproduces the social behavior, and allows for experimenting, scenario planning, and deep understa-ing of behavior, patterns, and potential outcomes. The pervasive use of computer and Internet technologies provides an unprecedented environment of various -cial activities. Social computing facilitates behavioral modeling in model building, analysis, pattern mining, and prediction. Numerous interdisciplinary and inter-pendent systems are created and used to represent the various social and physical systems for investigating the interactions between groups, communities, or nati-states. This requires joint efforts to take advantage of the state-of-the-art research from multiple disciplines, social computing, and behavioral modeling in order to document lessons learned and develop novel theories, experiments, and methodo-ies in terms of social, physical, psychological, and governmental mechanisms. The goal is to enable us to experiment, create, and recreate an operational environment with a better understanding of the contributions from each individual discipline, forging joint interdisciplinary efforts. This is the second international workshop on Social Computing, Behavioral ModelingandPrediction. The submissions were from Asia, Australia, Europe, and America. Since SBP09 is a single-track workshop, we could not accept all the good submissions. The accepted papers cover a wide range of interesting topics.

positive only when it is performed between equal members. Globalization of information does not minimize the possibility of conflict or terrorism, if fundamental social problems are not resolved or at least approached in an active way. This volume examines the major upheavals of the twentieth century and views within the framework of these events and challenges implications for the future. "Values and Cultural Changes in the Postmodern World," by Zygmunt Bauman explores the changing meaning of space in the globalizing environment; S.N. Eisenstadt analyzes the destructive components of modernity; and Irving Louis Horowitz draws attention to the classical values of the common universal culture. "Social Development and Policies in Contemporary Society," by Michael M. Cernea, examines the importance of the applied and policy-oriented research, especially in the developing countries, and David Marsland stresses the positive role of sociology in pointing to the possibilities of improving healthcare in modern society. "Societies in Transition-Eastern Europe," emphasizes transitions that have occurred in Eastern Europe. Rozalina Rjavkina and Leonid Kosals provide an incisive study of the situation in Russia, while Jerzy J. Wiatr presents a comparative analysis of postcommunist societies, with special reference to Poland. "The Jewish World: Pre- and Post-Holocaust," by Regina Azria, discusses the identity problems in the Diaspora confronting modernity; Eva Etzioni-Halevi considers the newly developed Israeli society from the point of view of the exercise and distribution of power; and a most interesting contribution by Annette Wiewiora concerns the material and spiritual effects of the Holocaust on the Jews of France. Social historians and students of Judaica, as well as a general public interested in cultural pluralism will find this well-developed volume essential reading.

Marital and Sexual Lifestyles in the United States: Linda P Rouse 2013-12-16 Learn the changing role of sexuality in American life! This helpful book offers a solid background in the sociology of family life and personal sexuality. Marital and Sexual Lifestyles in the United States: Attitudes, Behaviors, and Relationships in Social Context is designed to give readers a broad view of the diversity of contemporary U.S. attitudes, behaviors, and relationships. It also covers basic sociological concepts and research methods. Most human sexuality texts focus on the individual, whereas texts designed for sociology courses on the family downplay individual sexual expression. Marital and Sexual Lifestyles in the United States integrates the two approaches. The choices of the individual take on additional meaning when seen within a unified historical, statistical, and conceptual framework. Marital and Sexual Lifestyles in the United States gives readers the tools to consider such pressing issues as: Does the divorce rate mean that the institution of marriage is in trouble? Are children's futures impaired if they come from single-parent households? Should same-sex couples be allowed to marry? How does marriage differ from cohabitation? What are the real sexual differences between the genders? What is sexual morality? How much confidence can we place in studies of human sexuality by such social scientists as Alfred Kinsey and Masters and Johnson? These questions and others like them are placed in the context of U.S. social trends, beginning with the 1950s and moving toward today. Plentifully illustrated with tables, charts, and figures that show where we are going as well as where we have been, Marital and Sexual Lifestyles in the United States gives a clear perspective on relationships in social context.

Experiencing Social Psychology: Ayala Pines 1979 Designed to supplement a Social Psychology textbook, this experienced-based handbook actively engages students in the process of discovering social psychology. The authors have organized the chapters around thirteen topics that are generally considered to be the central concerns of social psychologists. Each chapter contains an introduction to the topic, readings to expose the student to theory and research, and a research project for the student to complete. In response to the growing emphasis in social psychology on application, the 4th edition includes articles on the applications of social psychology to health, law, and work. The fourth edition has a stronger cross-cultural focus, reflecting the move in that direction within social psychology. This new edition also addresses the heated debate on the science and politics of comparing men and women.
